Problem Statement

Organizations that manage employee records, leaves and attendance on paper, Excel sheets or chat messages face delays, data errors and a lack of transparency. HR spends most of its time on manual follow-ups, managers cannot easily see team leave and attendance, and employees do not know the status of their requests.

Customer Problem Statements

PS	I am	I am trying to	But	Because	Which makes me feel
PS-1	an HR executive	maintain employee records and approve leaves	records are scattered and approvals take long	data is in sheets and messages	overloaded and worried about errors
PS-2	a manager	approve leaves and track my team's attendance	I do not get a single view of my team	requests come on calls and chats	unable to plan work properly
PS-3	an employee	apply for leave and know its status	I get no update on my request	there is no central system	anxious and uninformed
PS-4	an employee	stay updated with company news	announcements reach me late	they are shared through different groups	left out

Reframed Problem

- How might we give HR, managers and employees one secure place to manage leaves, attendance, announcements and training?
- How might we make every request and its status visible to the people involved?
