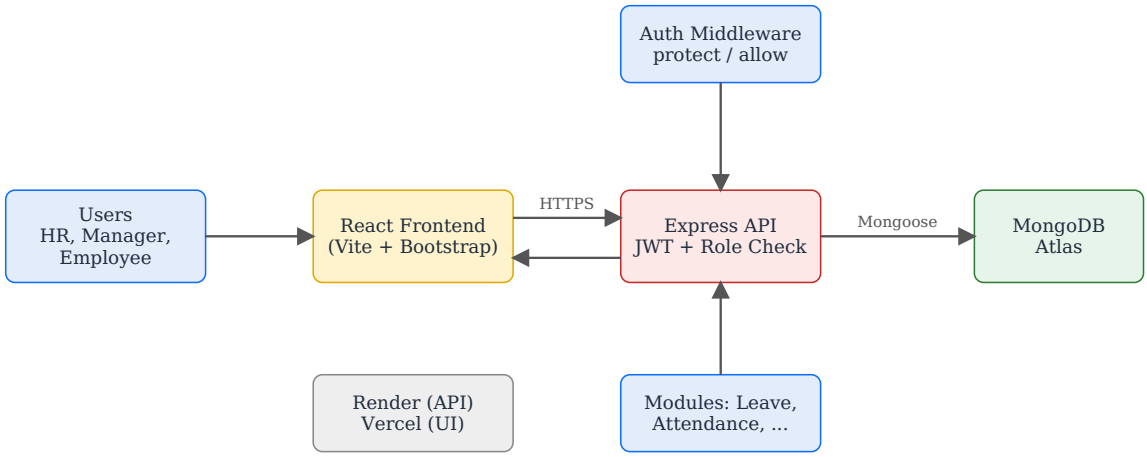
Solution Architecture

StaffSync - Modern Human Resource Management Solution

Project	StaffSync - Modern Human Resource Management Solution
Student	Neha Patidar
Enrollment No.	EN24CS3010683
Domain	Information Technology
Stack	MongoDB, Express.js, React.js, Node.js (MERN)

Architecture Diagram



Description

- **Client tier:** React app (Bootstrap UI) hosted on Vercel; Axios sends the JWT with each request.
- **Application tier:** Express.js REST API hosted on Render; *protect* verifies the token and *allow* checks the role.
- **Data tier:** MongoDB Atlas accessed through Mongoose models (User, Leave, Attendance, Announcement, Training).

Request Flow

- User logs in, server returns a JWT.
- Frontend stores the token and attaches it to every request.
- API validates token and role, then reads or writes MongoDB.
- JSON response is rendered in the role-specific dashboard.
